

The use of “Alt” and “Title” attribute in images and it’s important.

Uses of “Alt” attribute

1. Alt attribute on images is used to give information about the images. It is seen when image is not render completely on website.
2. Alt attribute is really helpful for blind people. They can’t see image but with the help of Finger-mounted reading device, they can feel the content written on alt attribute of an image.

```

```

Code shown above is the correct way to give alt attribute to an image.

Uses of “Title” attribute

1. Title attribute on images is used to give exact title of the image. It is seen when we hover the mouse over the image.

```

```

Code shown above is the correct way to give title attribute to an image.

Important of “Alt” attribute

1. There might be a case when an image is not render due network or any other issue. On that case it will be bad experience for the user to make it better we use alt attribute.
2. Sometimes due to slow network image might be render slowly, with the help of alt attribute now user can get some information without image being render.

Important of “Title” attribute

1. Sometimes we need to get exact information about image. Like identification of a person or place content on image.
